Supplemental Material for:

A Numerical Approach to Virasoro Blocks and the Information Paradox

by Hongbin Chen, Charles Hussong, Jared Kaplan, and Daliang Li

This Mathematica notebooks contains the implementation of the Zamolochikov's q recursion relation for the Virasoro blocks in 2D CFTs. See the paper for references and further explanation. This code can calculate the first 200 coefficients of the q-expansion in less than 10s, and for 1000 terms in about 45 mins.

Tested in Mathematica version 11 for Mac OS X.

For the implementation of this algorithm using C++, please go to

https://github.com/chussong/virasoro. The C++ code is somehow faster than this Mathematica code, and the q-expansion coefficients used in the paper were obtained using the C++ code.

(*Construct the q-expansion coefficient Hk.*)
qCoefList]
```

Examples

Example 1: c=30, $h_1 = 1$, $h_2 = 3$, h=0, N=1000

qCoeffient[30, 1, 3, 0, 1000] // N // AbsoluteTiming

(*qCoeffientPublic[] returns a list of the q-expansion coefficients, starting from the coefficient of q^0 , which is 1, and then that of q^2 , q^4 , etc. This list only includes coefficients of even powers q^{2n} , since the coefficients of odd powers are zero.*)

Example 2: Analytic coefficients

(*The code can also be used to obtain the analytic coefficients of the qexpansion (the result is given in terms of b). But one should notice that the coefficients for hihger powers of q (like q¹⁰) are pretty complicated.*)

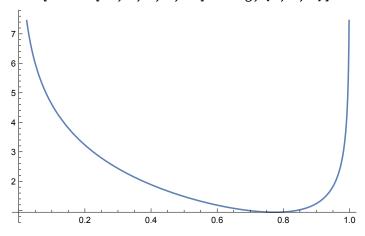

qCoeffient[c, h_L, h_H, h, 2] // AbsoluteTiming

$$\left\{ \text{0.000907, } \left\{ \text{1, } -\frac{4 \, \left(\frac{1}{4 \, b^2} - 4 \, \left(\frac{1}{4} \, \left(\frac{1}{b} + b \right)^2 - h_H \right) \right) \, \left(\frac{1}{4 \, b^2} - 4 \, \left(\frac{1}{4} \, \left(\frac{1}{b} + b \right)^2 - h_L \right) \right)}{b^2 \, \left(-\frac{1}{b} + b \right) \, \left(\frac{1}{b} + b \right) \, \left(-\frac{1}{4} \, \left(\frac{1}{b} + b \right)^2 + \frac{1}{4} \, \left(\frac{2}{b} + b \right)^2 + h \right)} - \frac{4 \, b^2 \, \left(\frac{b^2}{4} - 4 \, \left(\frac{1}{4} \, \left(\frac{1}{b} + b \right)^2 - h_H \right) \right) \, \left(\frac{b^2}{4} - 4 \, \left(\frac{1}{4} \, \left(\frac{1}{b} + b \right)^2 - h_L \right) \right)}{\left(\frac{1}{b} - b \right) \, \left(\frac{1}{b} + b \right) \, \left(-\frac{1}{4} \, \left(\frac{1}{b} + b \right)^2 + \frac{1}{4} \, \left(\frac{1}{b} + 2 \, b \right)^2 + h \right)} \right\} \right\}$$

Example 3: Plot the Heavy-Light Virasoro block

$$\begin{split} & \text{VBlock[c_, hL_, hH_, h_, N_] :=} \\ & \left(16 \text{ q}\right)^{h-\frac{c-1}{24}} z^{\frac{c-1}{24}-2 \text{ hL}} \left(1-z\right)^{\frac{c-1}{24}-\text{hH-hL}} \text{EllipticTheta[3, 0, q]}^{\frac{c-1}{2}-8 \text{ (hH+hL)}} \\ & \text{Table[q$^{$^{$}$}$, {i, 0, N, 2}].qCoeffient[c, hL, hH, h, N] /. q} \rightarrow \text{Exp[-π}^{\frac{\text{EllipticK[1-z]}}{\text{EllipticK[z]}}]$;} \end{split}$$

Plot[VBlock[30, 1, 3, 0, 10] // Log, {z, 0, 1}]

(*Series expansion*)

$$\label{eq:VBlock_continuous_con$$

Example 4: Lorentzian time behavior of the Virasoro block

(*Analytic continuation to Lorentzian time*)

$$\begin{split} \mathsf{EK}[\mathsf{r}_-,\,\mathsf{t}_-] &:= \mathsf{EllipticK}\big[1-\mathsf{r}\,\mathsf{E}^{-\dot{\mathtt{n}}\,\mathsf{t}}\big] - 2\,\dot{\mathtt{n}}\,\left(1+\mathsf{Floor}\big[\frac{-\mathsf{t}-\pi}{2\,\pi}\big]\right)\,\mathsf{EllipticK}\big[\mathsf{r}\,\mathsf{E}^{-\dot{\mathtt{n}}\,\mathsf{t}}\big];\\ \mathsf{qVal}[\mathsf{r}_-,\,\mathsf{t}_-] &:= \mathsf{Exp}\big[-\pi\,\frac{\mathsf{EllipticK}\big[\mathsf{r}\,\mathsf{E}^{-\dot{\mathtt{n}}\,\mathsf{t}}\big]}{\mathsf{EK}[\mathsf{r}_-,\,\mathsf{t}_]}\big]; \end{split}$$

VBlockLorentzian[c_, hL_, hH_, h_, N_, r_] := $(16 \text{ q})^{h-\frac{c-1}{24}} z^{\frac{c-1}{24}-2 \text{ hL}} \text{ (r)}^{\frac{c-1}{24}-\text{hH-hL}} E^{-iit\left(\frac{c-1}{24}-\text{hH-hL}\right)} \text{ EllipticTheta[3, 0, q]}^{\frac{c-1}{2}-8 \text{ (hH+hL)}}$ $Table [q^i, \{i, 0, N, 2\}].qCoeffient[c, hL, hH, h, N] /.$ $\{q -> qVal[r, t], z \rightarrow 1 - r E^{-it}\};$

VBlockLorentzian[30, 1, 3, 0, 200, 0.3] // Abs // Log; Plot[%, {t, 0, 30}]
